

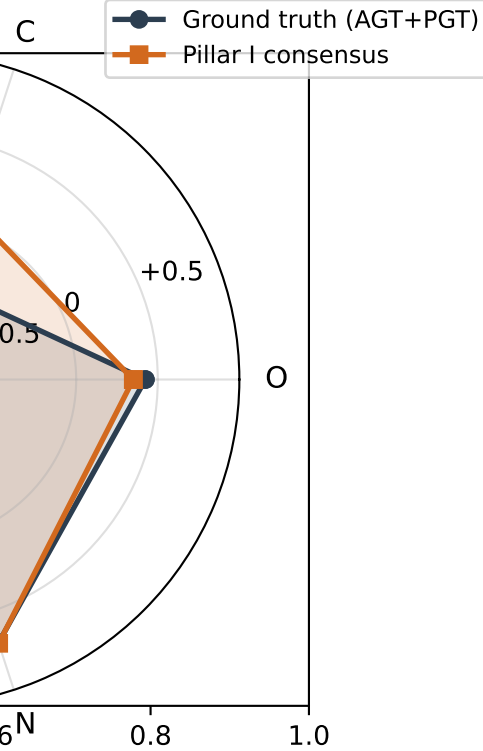

Figure 4. Pip in Great Expectations — full-pipeline case study

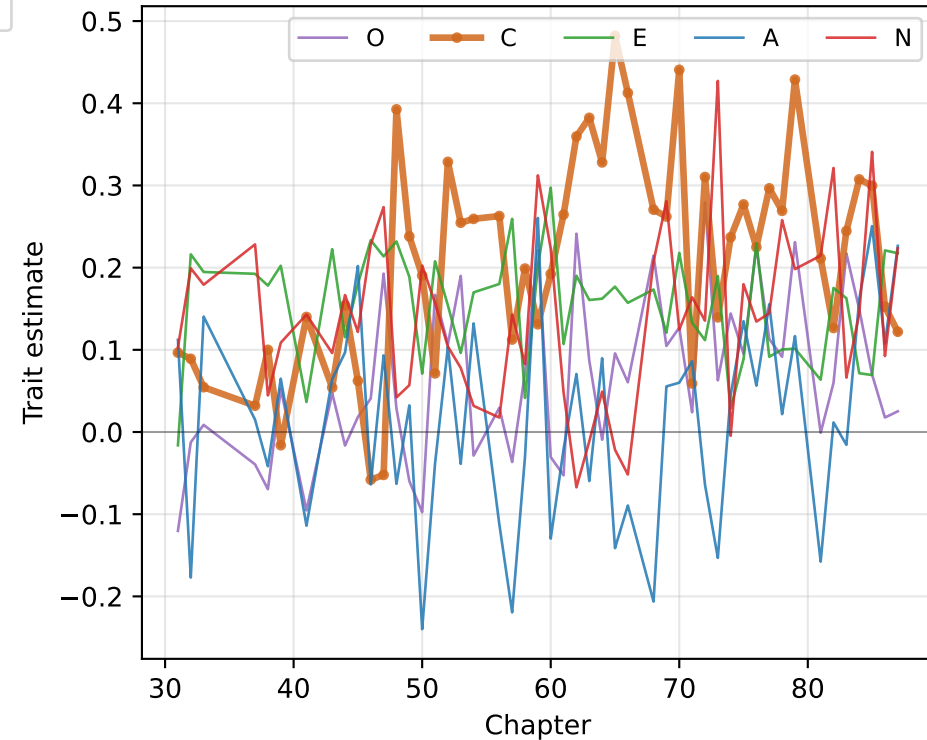

A. Pillar I profile (consensus vs GT)

MAE = 0.221

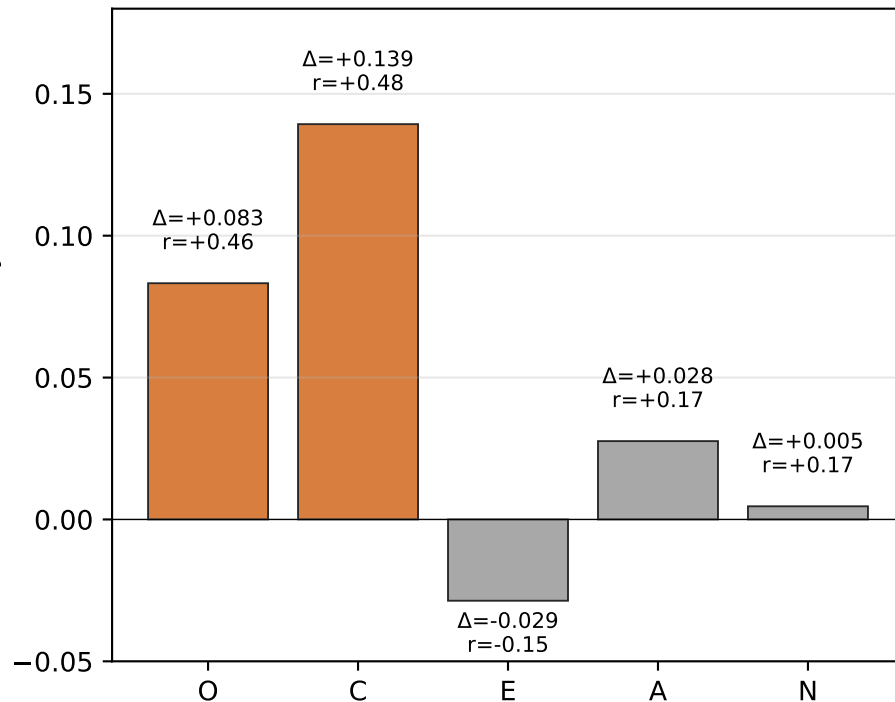

B. Stage 14 Layer W waveform (49 chapters)

C: $\Delta=+0.14$, $r=+0.48$ (principal arc)

C. Per-trait arc magnitude
(orange bars: $|r| \geq 0.3$ against chapter)

D. Scholarly comparison

Cambridge Companion to Dickens (2001) reads Pip's arc as the gradual moral education of a young man through suffering and reflection.

Stage 14 finding: principal arc is $\uparrow$ C ($\Delta=+0.14$, $r=+0.48$), with secondary $\uparrow$ O ($\Delta=+0.08$, $r=+0.46$). A barely moves ($\Delta=+0.03$, $r=+0.17$).

Pip's trait-level transformation registers on dimensions of discipline and self-knowledge (Conscientiousness, Openness) more than on dimensions of warmth or empathy (Agreeableness). This is consistent with the Bildungsroman scholarly framing rather than with a lay reading of "becoming kinder."

Whole-book Pillar I consensus over-predicts both C and A (consensus C=+0.10 vs GT=-0.40; consensus A=+0.55 vs GT=+0.10), plausibly reflecting the influence of Pip's adult-narrator voice on the aggregate.
